

PIN - Protect It Naturally Sustainable material for the protection of sensitive surfaces

The last decades packaging and product protection relied heavily on plastic films. But as environmental consciousness and the awareness of customers on the carbon footprint of products and companies increases, the need for sustainable alternatives become more and more important.

Sustainable Packaging Solution

Therefore we developed a smooth and soft material, which is made of 100% certified cellulose virgin fibers. Unlike conventional packaging materials our media is completely made without any chemistry.

Soft Protection

The soft feel is ideal for the protection of products with very sensitive surfaces and protects customer's products from scuffs, dust, grime and other impacts.

Fully Recyclable

As a completely natural product it is fully recyclable in the waste paper stream. This saves additional disposal effort and cost that would occur with plastic packaging solutions.

Dust-Reduced Paper

Based on the item on which we only use virgin fibers instead of waste paper, we can ensure our paper shows a reduced tendency to dust on the packed product.

Wide Range of Grammage

Our sustainable packaging solution can be customized to your products by a wide range of grammages to hit individual requirements.

Benefits

- Raw paper made from 100% certified virgin fiber
- For surface protection of painted or polished surfaces
- Very soft and smooth touch of the paper
- Fully recyclable
- Reduced tendency of dust
